NILS VOS

Vijverhof 27, 3295 HC 's-Gravendeel, Netherlands | vosnils@proton.me | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Applied Data Science & Artificial Intelligence student and AI Engineer with hands-on experience in Python development, computer vision, large language models (LLMs), machine translation, MLOps, and automation. Experienced in deploying machine-learning solutions, building data pipelines, and managing Linux-based infrastructure. Interested in production AI, computer vision, AI governance, and industrial IoT.

TECHNICAL SKILLS

Programming & Data: Python, SQL, Git, Linux, API Development, FastAPI, Data Processing, Data Pipelines, Database Management

Machine Learning & AI: Machine Learning, Deep Learning, Neural Networks, Computer Vision, Large Language Models (LLMs), Machine Translation, NLP, TensorFlow, Keras, Scikit-learn, OpenCV, Feature Engineering, Model Evaluation

MLOps & Infrastructure: Docker, Azure ML, Model Deployment, CI/CD, Cloud Infrastructure, On-Premise Inference, Linux System Administration

Automation & Governance: Tridium Niagara, Building Management Systems, Industrial IoT, AI Legislation, AI Governance, GDPR

PROFESSIONAL EXPERIENCE

AI Engineer Intern | Authority for Preventing Online Terrorist Content and Child Sexual Abuse Material (ATKM), Ministry of Justice and Security (Min JenV)

March 2026 – January 2027 | Rotterdam, Netherlands

- Develop and evaluate computer-vision solutions for applied AI use cases.
- Work with large language models (LLMs) and machine-translation technologies to support information processing and analysis.
- Research AI legislation, governance, and regulatory requirements relevant to responsible AI development.
- Contribute to AI engineering work in a public-sector environment within the Ministry of Justice and Security (Min JenV).

Software Engineer / Data Engineer | FOX BMS

Present | Heinenoord, Netherlands

- Develop and deploy building management systems using Tridium Niagara for commercial, healthcare, and industrial environments.
- Build Python automation tools for configuration and deployment, improving setup speed and reliability.
- Design data pipelines for real-time sensor data, building analytics, and operational monitoring.
- Manage databases and Linux infrastructure supporting automation systems across multiple client sites.

EDUCATION

Bachelor of Applied Data Science & Artificial Intelligence | Breda University of Applied Sciences (BUAS)

Expected June 2028 | Focus: Machine Learning, Computer Vision, Deep Learning, Data Engineering, Industrial AI Applications

CompTIA Security+ Certification (In Progress)

Expected 2026 | Cybersecurity Fundamentals, Network Security, Threat Management

SELECTED PROJECTS

PlantSeg — Agricultural AI System

Production deployed | Python, Deep Learning, Computer Vision, Azure ML, Docker

- Developed and deployed a computer-vision system for plant segmentation.
- Implemented an MLOps workflow with automated retraining, cloud deployment, and on-premise inference.
- Optimized infrastructure costs while supporting GDPR-compliant deployment.

DAF Truck Predictive Maintenance System

Academic research | Python, Machine Learning, Data Analysis

- Built a predictive-maintenance solution using telematics and vehicle data.
- Applied feature engineering and failure prediction to support maintenance scheduling.

Roadie — Traffic Safety AI System

GitHub | TensorFlow, Neural Networks, Data Engineering

- Built a neural-network model that achieved 94% accuracy in vehicle-accident prediction using telematics and environmental data.
- Designed a data pipeline and engineered features for real-time driving-risk assessment.

Additional projects: Niagara AI Pipeline; Video Emotion Analysis; Player Analytics; Reinforcement Learning for Robotic Control.
